Our history

1994

Eltec was born. Our first Lift model developed was without the need for an external controller. This all inclusive hydraulic traction system with counterbalanced cabin produced significant energy savings.

2002

Eltec achieved Marine Certification from the naval sector. New HL line was born starting with the HLT model and HLD modular aluminum car.

2008

Eltec began to move away from traditional and outdated steel materials. Development begun with a more efficient and corrosion resistant aluminum material. We started with new products in the Elsa and Elettra swing doors along with our glass and aluminum freestanding tower – a true showpiece in any space.

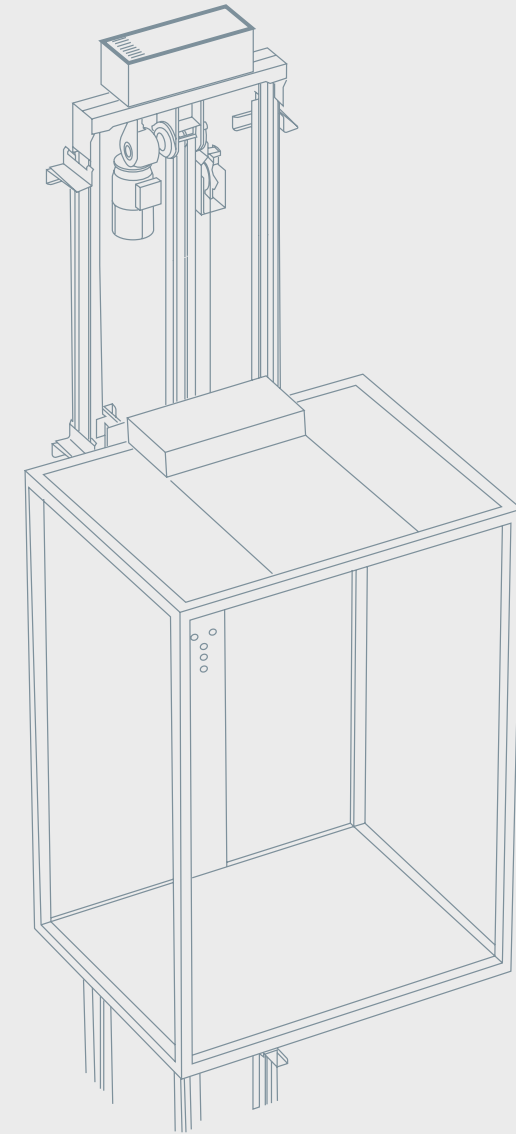

2011

The HLG Gearless was introduced. First Italian company to develop and offer a home lift with the technology of the large commercial sector.

2018

The series HLB belt drive system known for its quiet motor and low energy consumption became available. Providing a superior option to hydraulic and screw drive technology.

ELTEC specialises in the home lift sector and we are adapt in overcoming architectural challenges. Our mission is to innovate and consistently improve the comfort, aesthetics, sizing, installation and maintenance process within our industry.
